Skills

- SQL, Excel, Matplotlib, Python, Tableau, SeaBorn, Python Libraries, Java

Experience

Data Analyst / Software Developer Dec 2022 - Nov 2025

Ebix Technologies Pvt. Lmt. (EbixCash)

- Wrote and tuned 15+ SQL queries against Oracle databases — reduced average query run time by ~25%, which made a noticeable difference to teams pulling daily and weekly reports.
- Dug into application logs and database records to find the root cause of recurring production issues; the patterns I identified led to a ~25% drop in incidents over roughly six months.
- Designed and maintained relational schemas for three core business modules — defined constraints, indexing rules, and normalization standards that kept data clean and queries predictable.
- Worked directly with business analysts to understand what they actually needed from the data, then translated those needs into backend logic, queries, and database structures.
- Led a POC for migrating a legacy J2EE system to Spring Boot — mapped the full data flow and system dependencies; the analysis was adopted into the final migration roadmap.

Projects

E-Commerce Sales Performance Dashboard

https://public.tableau.com/shared/27MZ5FHM2?:display_count=n&:origin=viz_share_link

- Built an interactive Tableau dashboard tracking sales, profit margin, and regional performance across categories — the kind of thing that would take someone 30 minutes in Excel to refresh every week.
- Used LOD expressions and calculated fields to surface seasonal trends and identify 3 product categories driving ~40% of revenue; insights pointed directly at inventory and discount strategy gaps.

RFM Customer Segmentation

- Ran RFM (Recency, Frequency, Monetary) analysis on 10,000+ customer records to segment customers into Champions, At-Risk, and Churned groups — fully in Excel using pivot tables and custom scoring.
- Found that the top 20% of customers accounted for the majority of revenue; built a simple retention playbook with specific actions recommended for each segment.
